

## Drum Clamp

Drum Clamp - Forklifts are actually used to store, move and lift products placed on pallets. For businesses which make use of drums, they normally need an attachment so as to handle storing, lifting and moving them. There are several different attachments which a business can use for all your drum moving, storing and lifting needs. These attachments are specially used to deal with drum containers - therefore there is no chance of damage to the item or drum container when they are stored, moved or lifted.

### Drum Positioner And Grab

The drum positioner is obtainable in three and four tine models. They are operational for the loading and unloading of drums off vehicles, drum stands and racks. This accessory is totally automatic, therefore enabling the individual operating it to be able to operate all from the comfort of the forklift seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This accessory is intended for drum pyramid stacking.

The drum grab is fork designed and mounted with the sole objective of handling steel drums that have rolling hoops. Although the reason for the design was to deal with steel drums with rolling hoops, the drum grab could accommodate the moving of extra large and large plastic drums. Drum capacity maximum is 220 liters for plastic barrels and 210 for steel drums with rolling hoops.

### The Rotator

The drum rotator is a lift truck attachment that mounts on to the forks themselves. The purpose of the drum rotator is to be able to lift the drum and rotate it upside down. The drum fits in to the rotator utilizing a steel clamp that fits over the middle of the drum. The rotation is done by either a crank handle or a continuous loop chain. The crank handle is utilized for operations that take place beneath shoulder level. For operations that should happen above shoulder level, the continual circle chain will be utilized.

The drum tines are carriage mounted or simple fork accessories. They are intended for unstacking and stacking 210-liter metal drums. Stacking requires nothing elaborate, just simple horizontal placement of the drums. The carriage-mounted enhancements decrease the load center of the drums.

### Automatic Tongs

Drum tongs are available in semi-automatic and automatic versions. They are used in the open topped or tight head steel drum styles. The drum forceps can be connected in a few ways to the lift truck. One way is to attach them underneath a fork-mounted hook. One more way is to connect them to a carriage mounted jib or a fork-mounted jib. Either the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no requirement for the one operating it to ever leave the seat of the lift truck.

### Rim Grip Handler

When drums require storage with inadequate area obtainable, the Rim Grip Drum Handler is the best option in drum forklift accessories. This accessory would work for both the two hundred ten liter drums along with one hundred twenty liter drums. The Rim Grip Handler operates by using metal jaws to be able to hold the rim of the drum. It picks the drum up and sets it down without requiring any room between all the drums. The standard model used in the industry is a zinc-plated handler, even though, this attachment comes obtainable in stainless steel for the food and drink industry.
